

BIOMATERIALS STUDIO: SHOWCASE, 13 JANUARY 2022

The AUAS Biomaterials Studio is a space to explore the intersection between design and biotechnologies. Taking a do-it-yourself approach, the studio supports educators, researchers and students to leverage living systems and locally abundant, renewable resources to develop new design propositions with a smaller ecological footprint. Join us for a festive event with presentations of our updated material archive, recent RtD internship projects, and our newly developed Biomaterials Teaching Toolkit.
